

### **ALTIPLANO METALS INTERSECTS DOWN DIP EXTENSION OF FARELLON VEIN STRUCTURE**

**EDMONTON**, May 5, 2020 – **Altiplano Metals Inc.** (TSXV: APN) (WKN: A2JNFG) (“**Altiplano**” or the “**Company**”) announces that the 86.5 m Hugo decline extension has reached the planned 382 level and the crosscut has intersected the Farellon Vein system as anticipated. The 382 level is 13 meters below the previous deepest workings at the 395 level. Development will continue drifting both northeast and southwest on vein on both the 382 and 389 levels, with associated raises for stoping.

Alastair McIntyre, CEO, comments “The decline extension is part of Altiplano’s ongoing expansion plans at the historic Farellon mine designed to access lower levels of Cu-Au mineralization. By opening the 382 and the 389 levels, in addition to recovering the remaining material from the upper levels, this block opens new accesses expanding the bulk sampling program. I am also pleased to report that the work was completed on time and budget, while continually operating within safety and COVID-19 protocols.”

Farellon Vein system at the 382 level:
